

### **Accupack for 12VDC cameras**

This model can be used for all 12VDC models from AXIS. The basic version has a runtime of approx. 8h (depending on the camera model). Versions with longer runtime are also available. All models are equipped with Li-Ion batteries so they have no memory effect. Also, we have an overload and short-circuit control inside, for longer lifetime and security.

In the set is also a unique wallmount. The baseplate can be fixed with 2 screws. On this plate you can easily snap in the accupack.

Ordernumber 6201

**Ordernumber:6200/12**

## Special version for SANYO VCC 2100,2300,2500 ,4600

Basicly the same model like the 6201, in addition you have here a special mounting with a adjustable balljoint for the cameras. With this accupack and the memory card from the camera you will have a complete wireless solution for temporary installations

## Magnetic mounting for Accupack

As an option for all accumodells we offer the new magnetic pads. They are permanent magnets with a rubber seal. You are now abel to fix the accupack on iron steel ect.
