

## Animal observation camera

**It is not a joke, yes we have a camera which is special made for use in barnstables, chemical industry or swimming pools. Ammonia, Chlor and the other nice stuff in this areas damages alluminium housings after a short while. The housing we offer is made from a special material which resists this conditions.**

Why to observe pigs, cows or horses? Sometimes it is more interesting that the regular TV program, or? No, there are really good reasons to do that. Imagine a big farmstall , some animals are always sick or pregnant. So the farmer have to have a look sometimes a night if all is right.

Now you put the camera in front of the box. You need no additional light or power. Over your computer you now can see what´s happen and also the doctor can have a look and decide if he have to come or not. So you save time and money.

The set will have a protection housing with build in infrared illuminator, power supply (or batterys) and camera mounting.

**Picture show the model 6204-Ac**

**This camera works at nighttime without additional light with a range on 8-10m. It is equipped with LI-Ion accupack and have a runtime from 8h. Longer runtimes on request.**

**Versions:**

<b>Ordernumber:</b>	<b>IR-Light:</b>	<b>power supply:</b>
