

**Mounting base for AXIS Jovstick 295**

As a reaction to customer feedback we created a massive mounting base for the Joystick 295. They told us, that the model tips over when you make fast movements with the joystick. Basically, it looks very unsteady when you do not hold the base down on the table. To make it more stable, we created a massive mounting base which can be mounted easily on the bottom side of the 295. It will bring more comfort in the use of this part.

Baseplate AXIS 295
