

## Infraredset for AXIS M1011/M1011W or M1031

Since 1995 we manufacture Infrared solutions for use in hospitals. The first network models we use for that are the 207 series from AXIS. Now we offer the solution for the new M10series from AXIS.

**Who does it work?** As you know the camera itself is for daylight use only. So you have to change the Optic which is included in the kit. After doing this you have a BLACK and WHITE camera.

**Important notice: If you change the optic you have to open the camera housing. It should be done only by specialists.**

Into the housing you have a build in Infrared illuminator, power supply (or PoE splitter). The camera is covered though a for human eye invisible INFRARED FILTER. So nobody can see the camera behind it.

With this solution you will get clear and noiseless pictures in total darkness. Special in hospitals, for example in sleep labs or wake up rooms it is a benefit, that you do not see the camera itself and you did not use any additional light.

**Modell 6204**

**Modell 6204 /open**

**Screenshot under 0LUX conditions.**

**Range in total darkness is appx . 6-8m, wireless signal can be used also when the camera is mounted inside the housing**

**Waterproof version:**

For use in industrial areas we also offer a **IP 66** version. It is a not heated version so the temperature should not be below -2 degree/C.
