

### **Infraredset for AXIS 214**

Make your AXIS 214 to a real 24h camera. With our unique infrared illuminator the camera can work now also in total darkness and brings you clear, sharp and noiseless pictures.

Our illuminator is special designed for this camera. We use a light weight construction which allows us to mount the spot on the camera head. Most benefit for this is, that you illuminate only the area the camera is facing to. So there is no need to illuminate the whole room. So you need less energy. The spot can be switched ON/OFF over the I/O port from the camera. We use a advanced LED technology with a long livetime from more than 10000h.

The illuminator can be mounted easily to the camerahead. Also the power supply comes from the original camera power supply .Therefore a connecting module is included in the set.

### **Ordernumber:4004**

As a second version we offer this model with build in microfon and adjustable pre amplifier. So you can see and hear what´s going on in the dark. The microfon is very sensitive so you can hear the faintest sounds. Many units are used in Sleep labs.
