

## Special housing for covered observation

Basically as a custom solution we create this special housing. The customer wants to observe his shop, but the customer should not see any cameras. Therefore we made a camera housing which looks like standard lamps. Inside the housing we make a camera mounting and an illumination ring with white LED's. In front we mount a special mirror glass, so you can't see the camera behind.

We can use for this application many lamp housing models to integrate it better to the customers equipment. Here you can see another custom solution we make.
