Low ceiling mounting for AXIS PTZ camera

For installations in low ceiling areas like busstops, subways, park houses or shopping malls the basic mounting decises are too long. With this units you easily can touch the camera or damage. The second mounting you can get from AXIS is not fixable, so you can easily remove the camera without any tool.

Or new mounting plate is just 20mm high and the camera been mounted with massive screws from the backplate. Without using a tool you can't remove the camera.
