

**Franz Video Equipment**

Since 1993 Franz-Video-Equipment is producing customer specific video solutions. We are offering a wide range of accessories for AXIS cameras. We rely on the smart combination of our own product development. Development on build to order basis for our customers and distribution of high quality video products. You get all the service from a single source.

In our inhouse prototyping/tool making department we are producing housings and accessories to your requirements. Aluminium, steel or plastic can be finished precisely with CNC machines. We can make prototypes, small series or mass production. Also we can deliver the housings in the colour you like.

On this flyer you see some of our newest products for AXIS cameras. The full program you can find on our website :[WWW.FRANZ-VIDEO.DE](http://WWW.FRANZ-VIDEO.DE)

**Stainless steel housings:**

Many customers using cameras on coastlines, oilplatforms, harbours, ships or in hard outdoor environments. The most stainless steel solutions are very big and expensive. For this we create 2 new models which are small, well designed and to a very good price.

Just 293mm long with a diameter of 114mm most standard fixed cameras can be build in. The housing comes with heater, fan and sunshield.

Not even much bigger than the AXIS 215 this new domhousing comes with 2 heaters and 3 fans. Also available in a full PoE version.

**AXIS M1011 series**

With the new AXIS M1011 series we also updated our outdoorhousing series. Beside a new design the housing also gets new features like UV cutfilter frontglas for better outdoor colour quality, build in power supply and easy mounting plate from the backside.

outdoorhousing with build in heater, fan and power supply. Works form 90-230VAC

Infraredset with build in IR-LED camera covered behind a for human eye invisible black filterplate. works in 0-Lux up to 8m

Infraredkit, outdoorversion IP 65

outdoorhousing with covered cable channel

**Specials:**

- build in PoE splitter (not for heated version)
- build in Li Ion accu pack
- for AXIS M1011/M1011W and M1031W we have different lenses in the program

**Animal observation camera**

No, not a joke. Yes we have a camera which is special made for use barnstable or for the chemical industry and indoor swimming pools. Aluminum housings did not live long in this rugged conditions. Ammonia, chlor and other nice stuff damages the housings. This special plastic material resists this. The housing is IP 68. The shown kit have a infrared illuminator and a build in 12h accupack. The wireless option can be used because the housing is made of plastic.

Why to observe pigs and cows and horses? Sometimes it is more interesting than the TV program, no, if you have sick, pregnant animals and a big farmstall so there is no need anymore to have a look to them sometime a night. With this system you, the doctor or the owner from the animal can have a look what's going on. With the wireless, infrared and accuolution you are totally independent to move the camera around every day, from box to box. You can switch of the light, because this camera works in total darkness.

At last here are some special accessorie solutions for different AXIS camera modells

Wallmount with integrated PoE splitter for AXIS M1011

Accupacks in 5VDC and 12VDC version. The kit comes with a camera mounting. The basic modell have a 8 h runtime. Versions with longer runtimes are available.
