

### **Microfonset for AXIS 214**

Our microfon set can be mounted directly tot he camera head. So you do not have 2 parts to install. While mounted on the camera head the microfon moves with it. So the most sensitive area from the microfon is in the field you are looking to.

In the set you also have a adjustable pre amplifier. The power supply for the kit you get from the original camera power supply over a switch box, which is also includet in the set.
