

NEWSLETTER 01/2008

Dear partners and friends. While having so much request about it , we now want to launch our NEWSLETTER which we want to send you 2 or 3 times a year. The idear behind is to show you products are available now and also some new prototypes and special editions which can give you an idear what we are doing in addition to our standardprogram. Pleace also have a look from time to time at our homepage there you can find more detailed information about the new products.
 So let's start very spectacular...
 one of our best selling product the 6206/6207 housing for Axis 206/207 got an facelift. Also inside we made new mountings for a very easy installing the camera. As an add on a new version is available for AXIS 207W and 207MW without heating system.

New modell fro 207W and MW without heater

From the outside design we now use a full aluminium glasholder beside the back aluminium we have before.

AXIS 212

We got some mountings for this modell, fixed and flexible modell. We also get many comments about this mountings from you. Many users from our flexible modell would like the product but also more design for indoor use. Here it is. Now we can deliver the new wallmount it replaces the old modell 10100. The best is, that it is still the same price.

Easy to adjust 0 to -90 degree and +/-180 degree horizontal. Fixed over a massive balljoint. Also new is the option to mount the camera itself for indoor use or our outdoorhousing to this bracket, so it is not longer necessary to have two different versions.

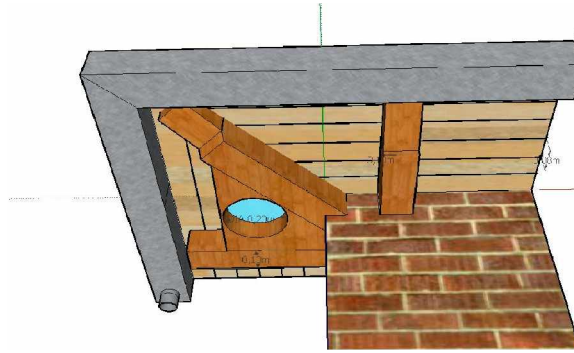

AXIS 206/207/207W Infraredkit

Special for our customers working for hospitals we made this unit. With this set you got sharp and noiseless pictures in 0-Lux conditions. In the housing integrated is a infraredlight which can be switched ON/OFF over the I/O port. The camera is covered by an special Infraredfilter which makes the camera invisibel, so nobody can see the camera behind. For the camera this filter is just glas. For this unit you also have to replace the original optic by our special night optic. The pictures you get are B/W.

AXIS 215

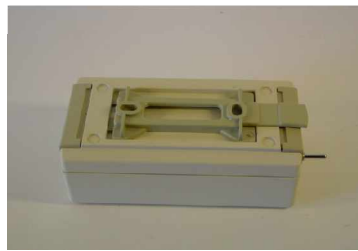

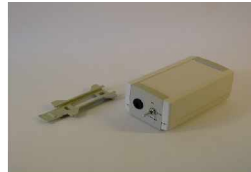

Available now is the false ceiling housings. Included in this housing is a heater, fan and the power supply. It covers the camera against dirt and low temperatures. The housings we sold are mostly used in outside roof mountings. Here you can see an example from a project in Turkey.

in the second picture you can see, that the mounting ring are special painted for the customers needs.

Akkupack for AXIS cameras

Also at a new release we offer now different models of accupacks. On the picture you see a built-in Accupack for the 2xx series into the housing and a stand-alone model. Last one is coming with a unique mounting device. This bracket can be mounted with 2 screws. The accupack can be mounted and released easily to it.

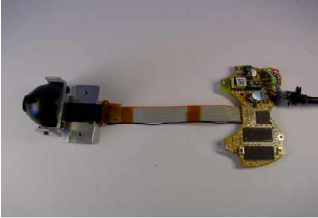

Prototypes:

The parts we are showing now are just for giving you an idea about products we will offer soon in our main program. So they are not available now. You are welcome to give us comments and wishes for this to create a perfect product.

AXIS 209

Some customers have a need to lengthen the image sensor from this camera to create new housings and applications. This first model will be lengthened up to a total of 15cm. We now try to get 25 cm.

Housing 9000 series

It will be an add-on to this housing series. Over the I/O port you can switch ON/OFF a water pump over these 3 blast pipes you can spray water to the bubble and wash dirt away.

Also a new optical corrected glass, special for the 233 is coming soon.

AXIS 212

Soon we can offer a heating kit for our housing. This includes heater and fan. A great benefit is, that you can update your existing housings with it.

I hope you found something for your interest in this release. You are very welcome to send us your comments or ideas. I guess the next newsletter we will have in August this year, but please also have a look at my webpage.
