

**Holliday resort in Turkey secured by AXIS Videocameras**

For more security the management from this resort chooses AXIS networkcameras. One of the demands from this customer was a observation system which is flexible with PTZ function but not so visible like a domhousing. One solution is to build in the AXIS 215 in false ceiling mount under the roof. In addition the housing should be small as possible, heated, waterproof and with a build in power supply and fans.

As a first step we get mechanical drawings from the owner and remodell our housing ,ordernumber 9500, for use with the 215. Also we paint the glasscover in the colour he wants to have.

Camera after final installation

Here are the mechanical drawing we get from the customer to fit in the housing

Housing 9500:

False ceiling housing, water proof with heater, fan, build in power supply and fan.

**NEW!!** Now available housing with AXIS 232 mounting kit
