

NEW mountig adaptor for AXIS camera wallmounts

With most AXIS cameras you get the standard wallmount you can see below

In some cases there would be a need to have a longer ,shorter version or you want to mount it for example with screws having M-threads. With our new adaptor you can create your own mounting with a minimum of cost . It is really easy to assembl it.

Step 1

take the adaptor out of the box, here you can see on the backside the M4 threat (other threats on request)

Step 2

Remove the balljoint from the original wallmount

Step 3

Screw the adaptor into the balljoint, so you can see the M4 thread on the backside

STEP 4

Now you can mount it to your camera

You can use Standard M4 screws or distant bolts are available in many different length.
